

Systematic Equity Markets

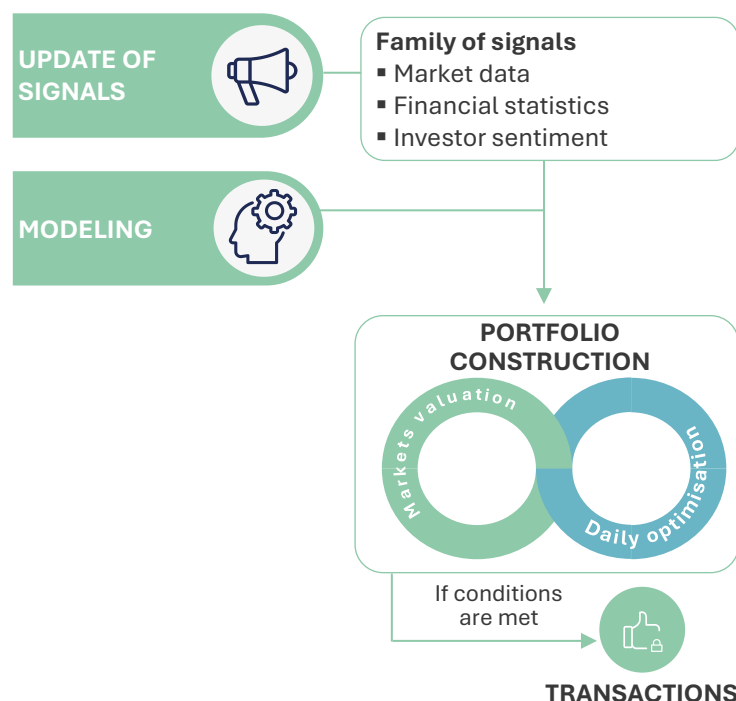

Strategy summary

The strategy applies a long/short approach to global equity markets, with the objective of maximizing returns through controlled volatility, while maintaining a very low correlation to traditional asset classes.

With a variable market bias, it aims to leverage trading opportunities between equity indices by trading index futures contracts, ETFs and baskets of individual stocks. This strategy uses complementary signals which have been consistent and robust in the past and whose prospects are rationalizable.

Beta	Target of -0.3 to 0.3
Volatility	Target of 4.5% to 7.5%
Currencies	Hedged 100% in USD
Exposure by index	Maximum 15%
